

Guess the Number Assignment

Total Marks: 100

Learning Objectives

- Import and use Python modules
- Generate random numbers
- Take user input
- Use conditional statements
- Create loops
- Handle exceptions
- Count attempts
- Build a complete console game

Step 1 (5): Import the random module.

Hint: `import random`

Step 2 (10): Generate a random number between 1 and 100.

Hint: `random.randint(1, 100)`

Step 3 (5): Display a welcome message.

Step 4 (10): Ask the user for a guess using `input()`.

Step 5 (15): Compare the guess.

- Too Low
- Too High
- Correct

Step 6 (15): Repeat until the correct answer using a while loop.

Step 7 (10): Count attempts.

Step 8 (15): Validate input using `try/except`.

Step 9 (5): Display a winning message including attempts.

Step 10 (10): Write clean, readable code.

Bonus (+20): Complete any four:

- Play Again
- Difficulty Levels
- Very Close Hint
- High Score
- Max Attempts
- Main Menu
- Performance Message

Marking Breakdown:

$$5 + 10 + 5 + 10 + 15 + 15 + 10 + 15 + 5 + 10 = 100$$
